

PlanWorks Partner Action Plan

Data and Information

Use stakeholder relationships to explore and evaluate data sources for performance measures

Data Subgroup will identify data needs and possible data sources

In September and October 2016, Strafford MPO interviewed stakeholders and discussed possible data sources.

In progress. Strafford MPO will continue to review stakeholder transcripts from previous engagement and will schedule additional meetings to gather information from stakeholders regarding possible data sources.

Determine standards for formats and methods for data collected by workgroup members

Data Subgroup will develop standards for data collection specific to this project

Data Subgroup completed work for the project in March 2017. Strafford MPO will develop a Data Collection and Management Plan.

In progress. Due to time and funding constraints, Strafford MPO will develop a Data Collection and Management Plan that implements the top picks from the list of potential future measures. This will be completed in spring 2018.

Create a catalog of existing data resources that may be useful in calculating performance measures

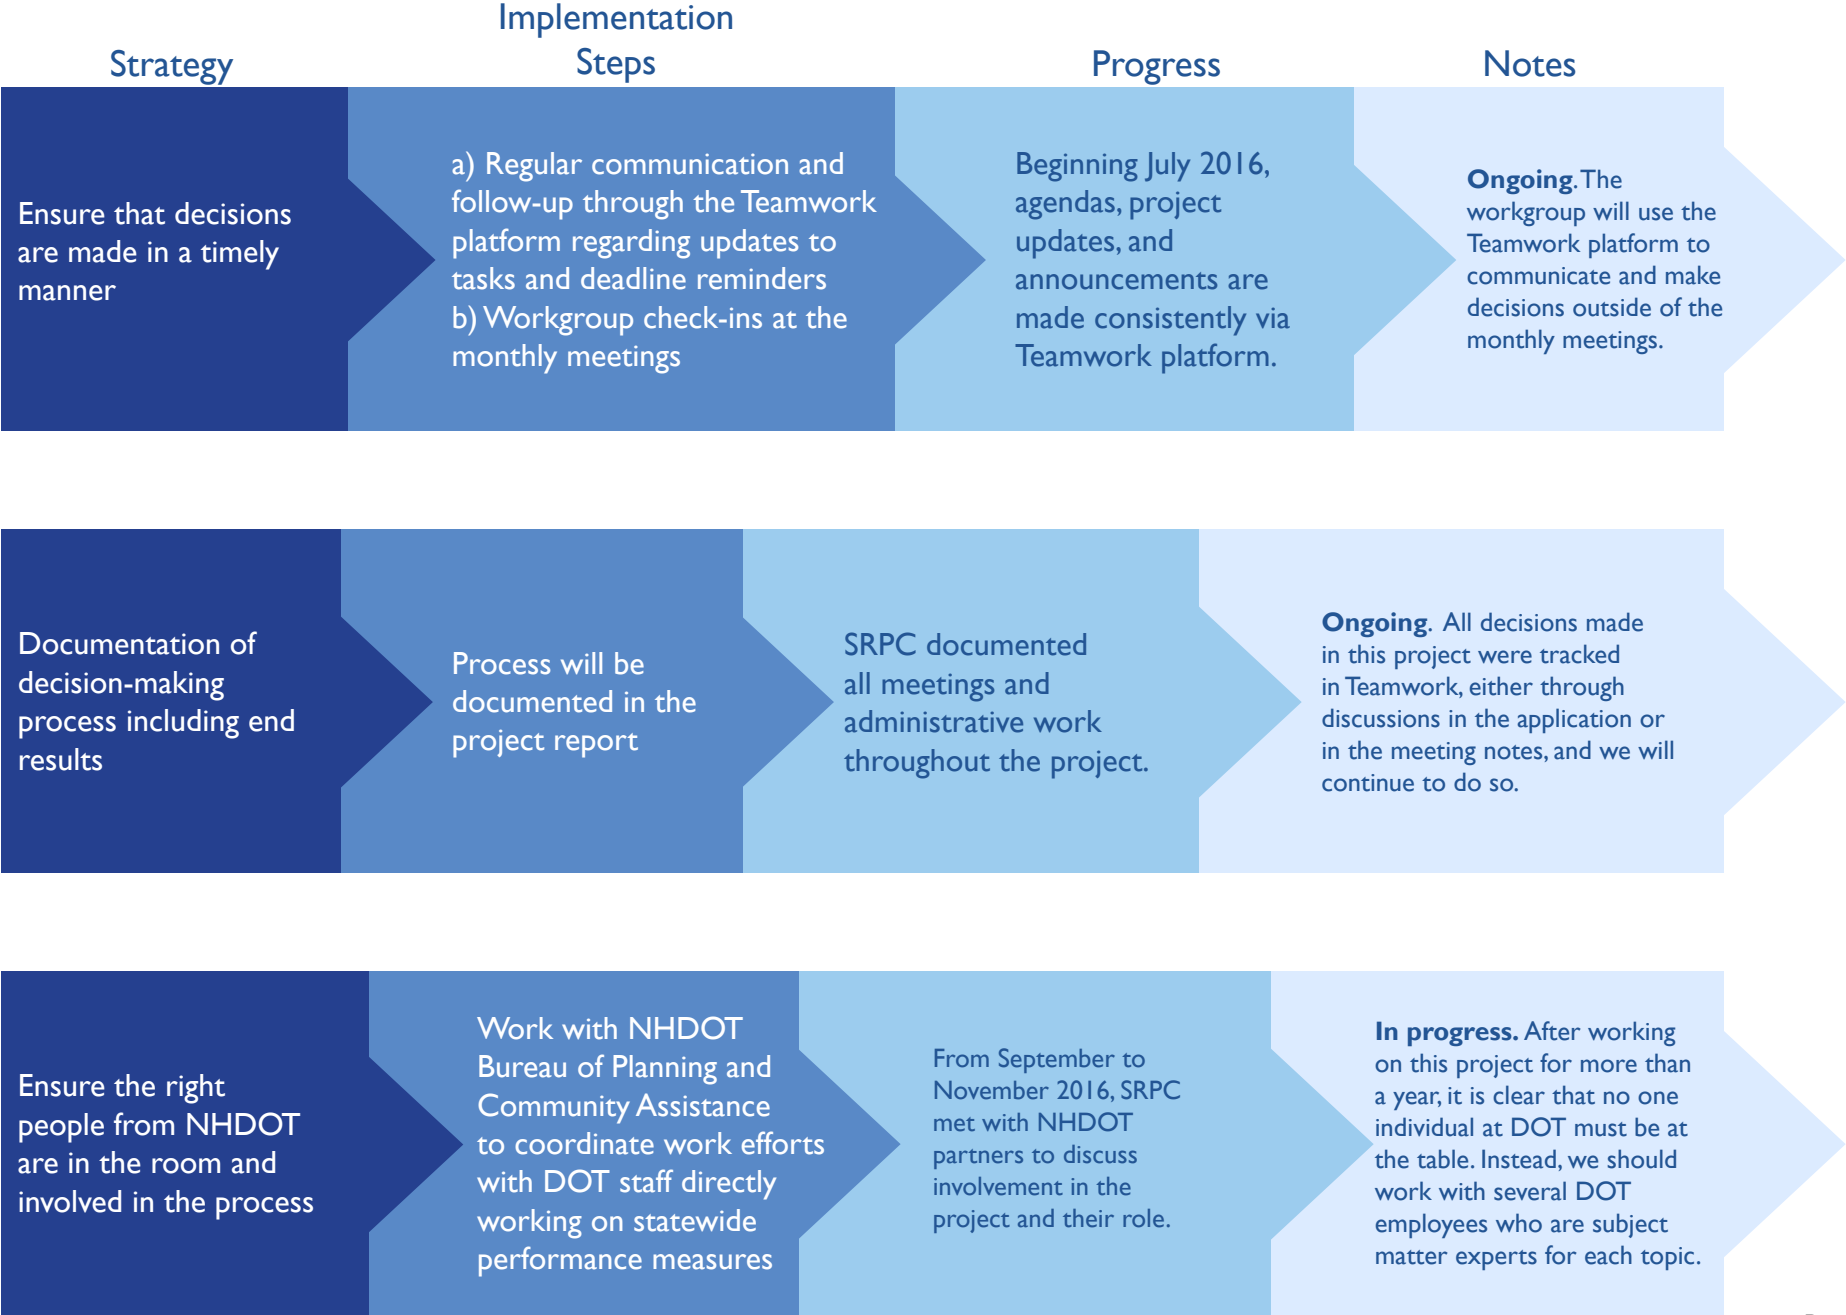

Data Subgroup will use *Teamwork Links to catalog the data resources that will be used for the calculation of performance measures

(*Teamwork is an online project management system)

In May 2017, the workgroup created a catalog of data resources that was available on the project website.

Complete. The System Performance Report contains all of the data sources currently in use. The workgroup will continue adding data going forward.

Decision-Making Authority

Ensure that Workgroup participants have the necessary decision-making authority from their agency

MPO SHRP2 staff will have internal discussions with respective executive directors to clarify roles and decision-making authority

In December 2016, the workgroup members discussed this item and agreed that they had the appropriate level of decision-making authority from their agency.

Ongoing. This is not perceived to be an issue or concern because the executive directors agree that the MPO group is valuable.

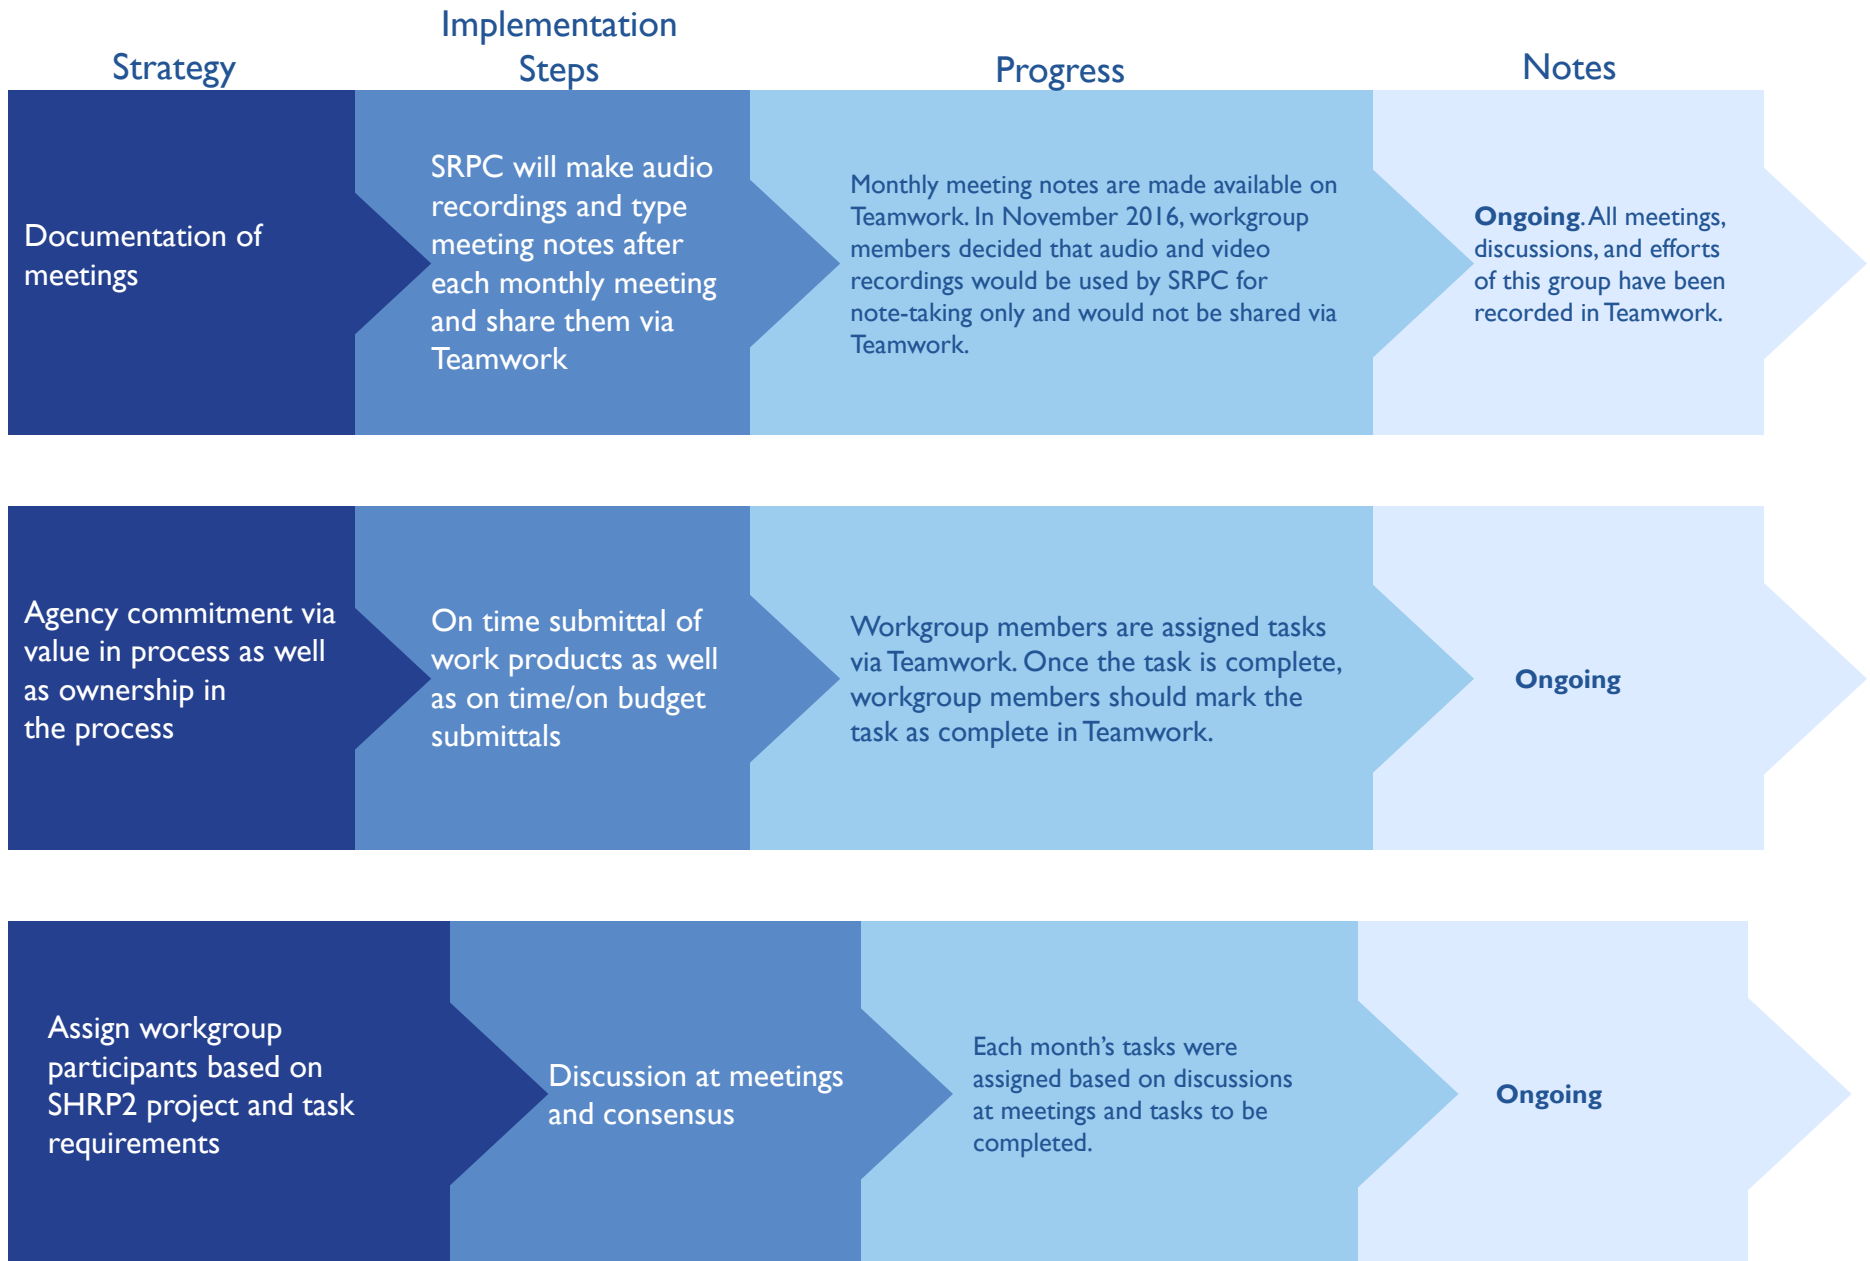

Mechanism for periodically checking in with MPO policy committees on project progress and reporting back results

MPO SHRP2 staff will update their respective committees (TAC, Policy, etc.) on all things SHRP2

In September 2016, MPOs agreed to update their respective TAC and Policy committees at recurring meetings. SRPC also requested that MPOs track updates to TAC and Policy committees and send this information to SRPC, with invoicing.

Complete. In addition to the MPOs being able to update their TAC and Policy committees at any of their meetings, Strafford MPO presented at each of the committees' meetings in the spring of 2017.

Participant Stability

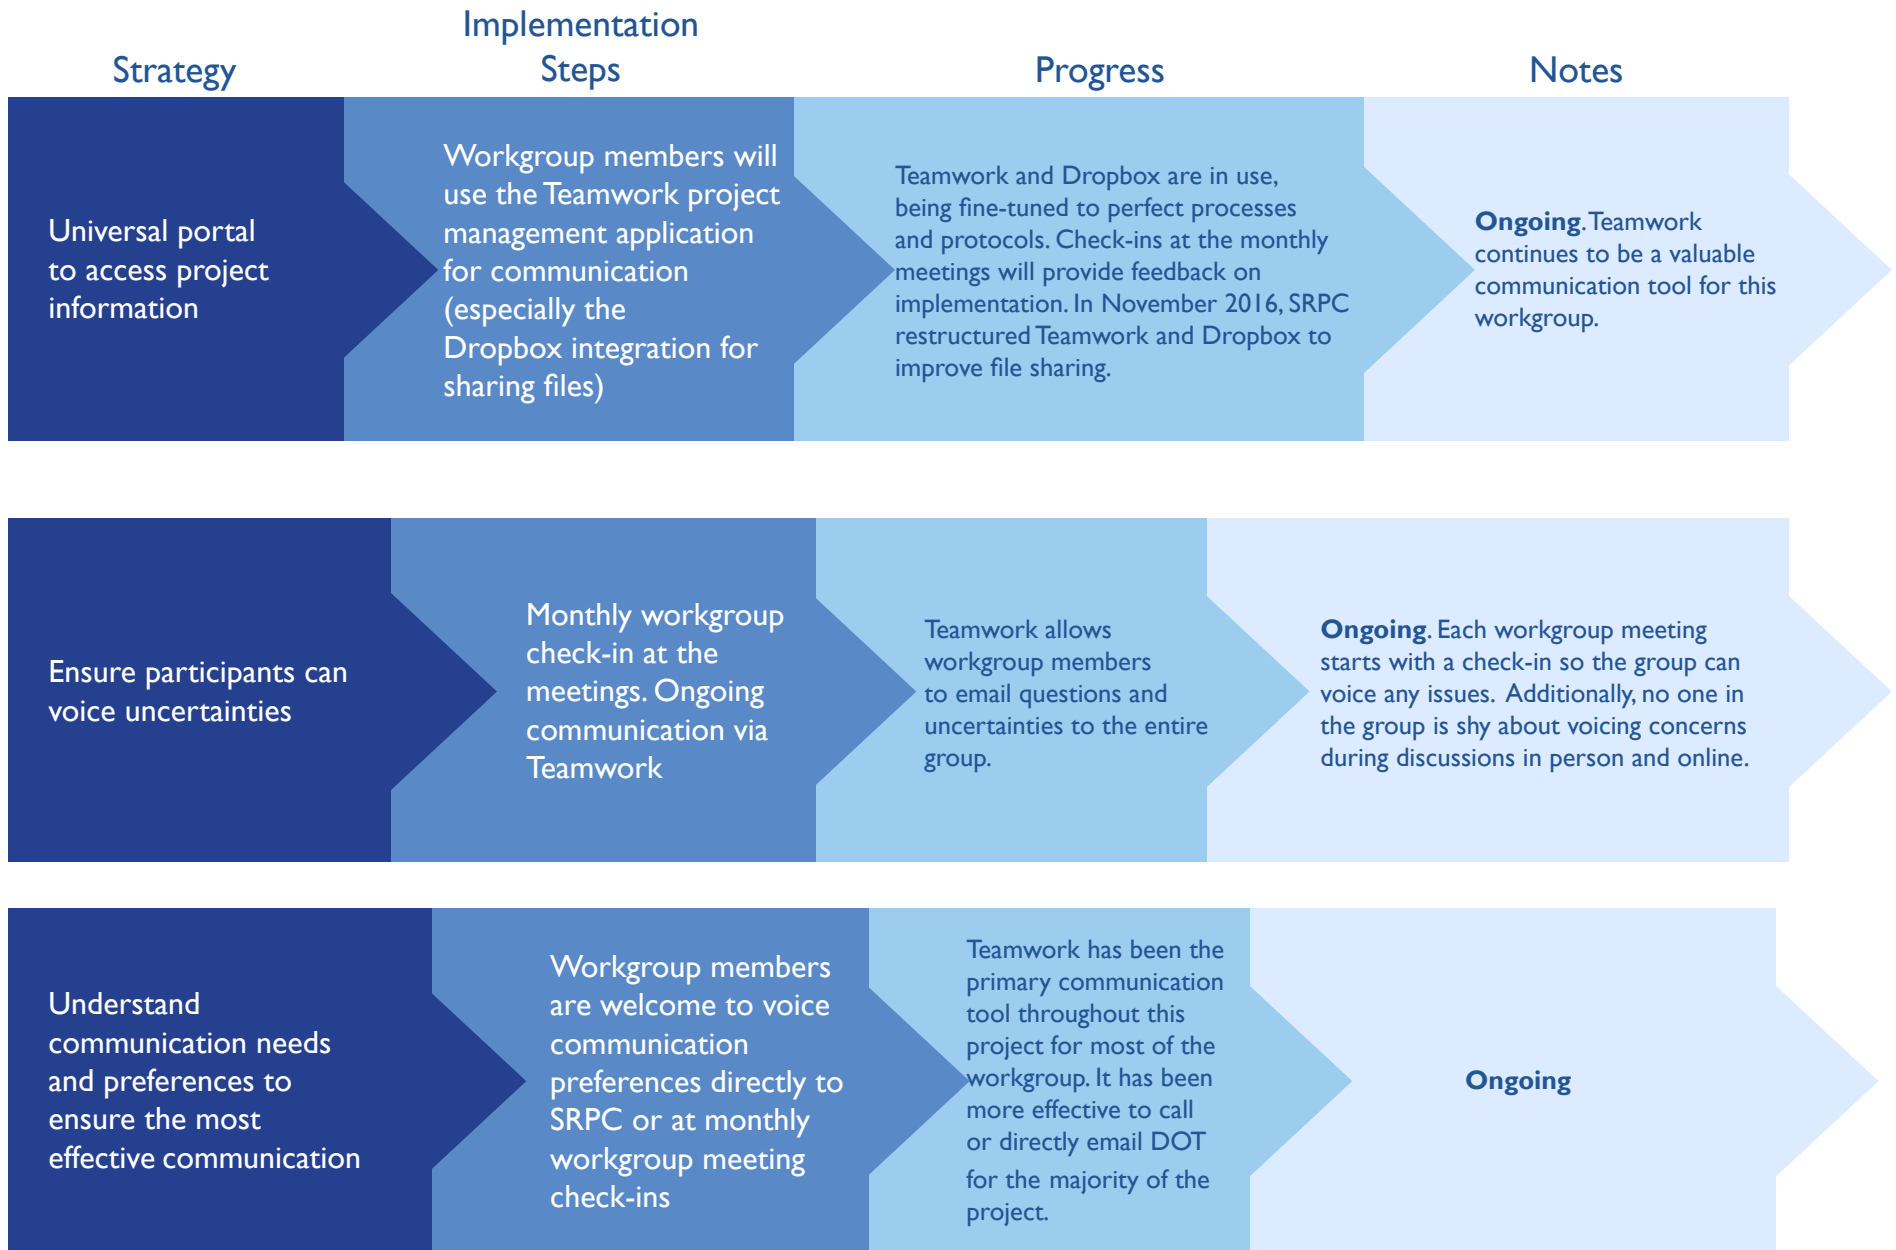

Have “back-up” SHRP2 participant who is familiar with the project and who could be an alternate

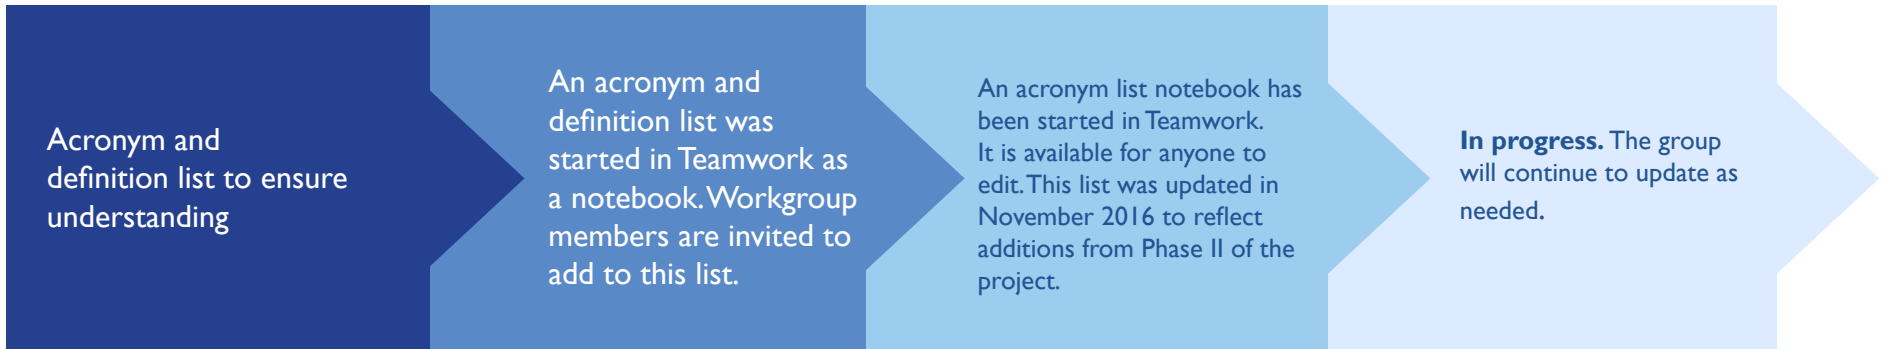

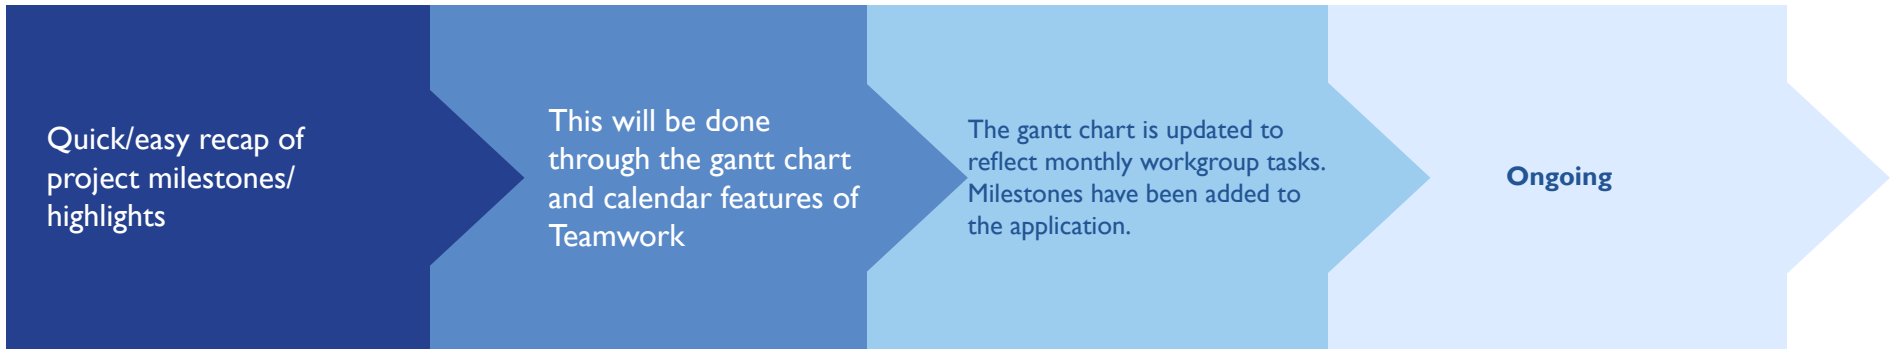

Each MPO will identify a back-up staff member who will attend meetings and complete work in their absence

Workgroup members have identified team alternates to sit-in for them in their absence. SRPC provided individual training and SHRP2 orientation for new hires. In November 2016, the workgroup discussed this strategy and decided that an alternate was not necessary because they were confident that work would be completed on time. This strategy was marked complete at the January meeting.

Complete

Practitioner Communication

Role Clarity
